

PROJECT LEO IN EYNESHAM

WHAT IS PROJECT LEO?

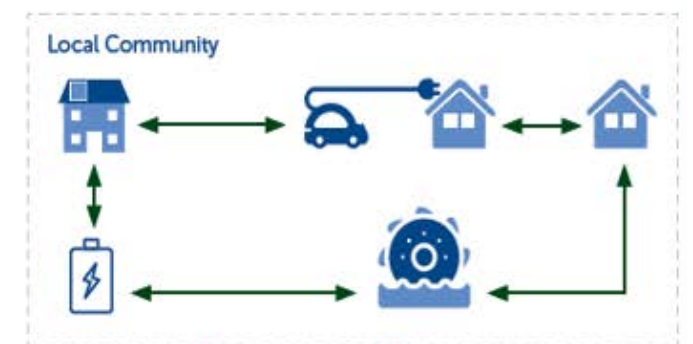

Project Local Energy Oxfordshire (LEO) is one of the most ambitious, wide-ranging, innovative, and holistic smart grid trials ever conducted in the UK. Project LEO aims to test how we can unlock opportunities from the transition to a smarter, flexible electricity system, with a focus on renewable and low carbon energy.

A local energy market buys & sells electricity instead of fruit and veg, but everyone still has to be able to get access to the market to get a 'good deal'.

The **Smart and Fair Neighbourhoods programme** will help us understand how to do this in an equitable and fair way for everyone in Oxfordshire so that we can all enjoy the opportunities and benefits it will bring.

The programme aims to provide opportunities to put renewable energy generation at the heart of a smarter, low carbon, more locally focused energy system.

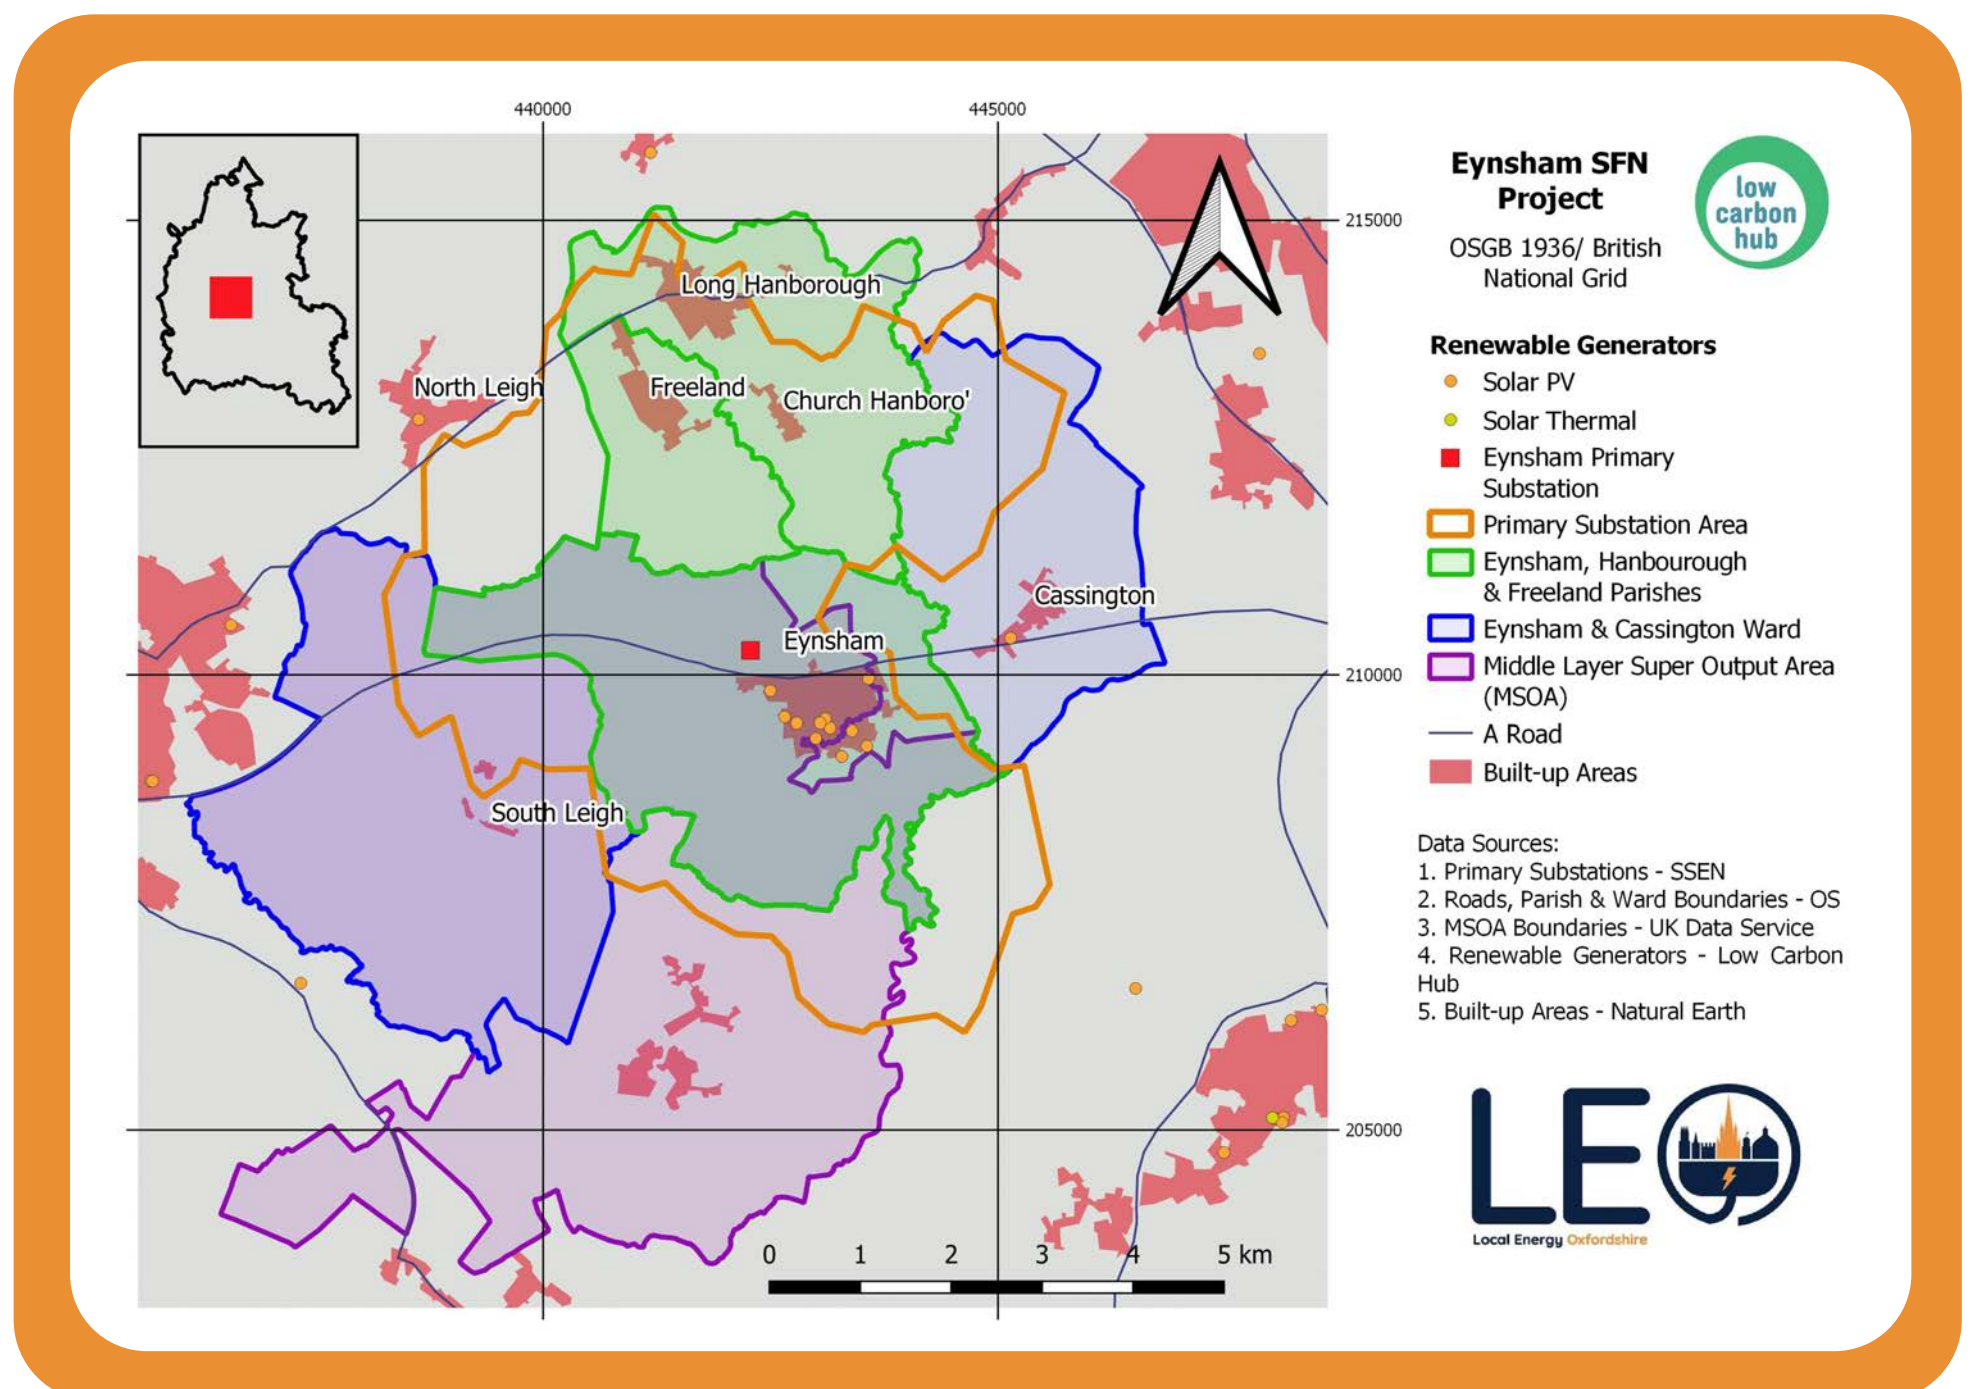

DID YOU KNOW THAT EYNESHAM WILL BE PART OF THIS EXCITING OXFORDSHIRE PROJECT?

The aim in Eynsham is to develop an Energy Action Plan for Eynsham and other near-by parishes, that reaches the goal of a zero-carbon energy system in advance of 2050.

The **Smart & Fair Futures project** also intends to ensure long-term local stewardship of the Energy Action Plan.

The Plan will need to cover a wide range of options – from energy generation to energy efficiency, for existing buildings as well as the new housing developments and for transport too.
